

Warranty

Sequoia Systems Ltd guarantees this kit to be free of defects in both material and workmanship at the date of purchase. Under no circumstances shall Sequoia Systems liability exceed the original cost of the purchased kit.

The finished model is intended to be flown under radio control, however this model is not a toy, and if flown carelessly or recklessly, or if suffering equipment failure, can cause severe damage or injury. Only fly this model in a safe area, and only if you are completely satisfied you are competent to fly the model safely without danger to people or property. **It is absolutely essential that any person flying this model should be insured under a specialist model flying policy and adequately covered for any third party liability arising therefrom.** UK customers should join the British Model Flying Association which includes such insurance, renewable annually, and which offers guide lines for the safe operation of model aircraft. Customers from other countries should join their equivalent organisations.

Sequoia Systems Ltd has taken every precaution to ensure that the instructions included with the kit are clear and comprehensive, and provide sufficient information to enable the model to be constructed satisfactorily.

However, since Sequoia Systems Ltd has no control over the particular assembly procedures or the equipment used in the final assembly, no liability shall be assumed nor accepted for any damage resulting from the use by the user of the final user-assembled product. By the act of using the assembled product, the user shall accept all resultant liability. **If the buyer is not prepared to accept the liability associated with the use of this product, the buyer is advised immediately to return this kit in new and unused condition to the place of purchase.**

The completion of this kit requires the use of very sharp tools and potentially hazardous adhesives which require careful use. Builders must satisfy themselves that they possess the necessary skills to use the required equipment. This kit is not suitable for young children. Older children building this model must be properly instructed in the use of the necessary tools and equipment, and adequately supervised by an adult to ensure no injury is incurred by either the child or anyone else.

And finally ...

If you find that any of the precision cut pieces become damaged before or during construction, don't try to cut an equivalent part yourself, let us know and we will endeavour to send you the necessary part(s) quickly and at reasonable cost to cover the part(s) and postage.

If you should suffer a flying incident, which results in structural damage, make sure that all electronic and electro-mechanical systems and batteries are still serviceable before flying again. If the structural damage requires many components such as a new tail or wing panel, once again contact us for a new set of components. The Greenfinch 234 has been rigorously tested for structural integrity, and possesses enormous strength and durability compared with most model aircraft, and will best maintain this strength only with original components.

Thank you for purchasing the Sequoia Greenfinch Two-Thirty Four.

On behalf of Sequoia Systems Ltd

Roger Moffatt
